

IRON MAN

MCU ARMOR COMPENDIUM

MK I — MK LXXXV | Every Suit, Every Feature

All 45 suits appearing in the Marvel Cinematic Universe listed individually with full documented capabilities, weapons, and specifications. Iron Legion JARVIS app descriptions (official marketing canon) quoted verbatim. Speeds in m/s where known. 1 Mach = ~340 m/s at sea level.

PHASE 1 — CLASSIC SUITS (MK I – MK VII)

MK I	Prototype Cave Suit Iron Man (2008)
Construction	Iron-copper-magnesium alloy over leather undersuit; built entirely from salvaged Stark weapons components inside a terrorist cave
Weight	~1,500 lbs fully loaded with liquid propellant tanks
Power Source	First-ever miniature Arc Reactor — built in captivity
Flight	Solid-state rocket-fuel jet boots; near-vertical lift for a few seconds only; zero aerodynamic control
Weapons	2× wrist-mounted flamethrowers; 1× manually deployed rocket launcher (limited ammo)
Protection	Bulletproof vs. small arms; multiple vulnerable gaps at leg motors and joints; rushed construction
Strength	Greatly enhanced; overpowered armed terrorists and survived hard landing after escape
Weakness	No HUD, no AI, no repulsors; extremely heavy; exposed motor on lower back
Fate	Left behind after escape; recovered by Obadiah Stane; used as blueprint for Iron Monger

MK II	Prototype Flight Suit Iron Man (2008)
Construction	Polished titanium alloy; fully redesigned aerodynamic form from MK I
AI / HUD	First suit with JARVIS OS integration and a fully functional holographic HUD
Flight	Fully functional repulsor boot thrusters and hand gauntlets; first suit with sustained, controlled flight; supersonic-capable in tests
Weapons	Repulsors in hands, feet, and chest RT only — no additional armament
Navigation	Real-time altitude tracking, atmospheric data, targeting overlays
Weakness	Severe icing problem at high altitude — joints freeze and disable flight controls above ceiling
Fate	Taken by James Rhodes; repurposed as War Machine MK I

MK III	First Full Combat Suit Iron Man (2008)
Construction	Gold-titanium alloy; iconic red and gold color scheme (inspired by Stark's car collection)
Power Source	Arc Reactor (circular); gold-titanium alloy composition solved the MK II icing problem
Flight Speed	~130 mph (~58 m/s) documented combat speed; supersonic in short bursts

Weapons	Palm repulsors (first offensive use); Unibeam (chest); anti-tank missiles; built-in minigun; shoulder-mounted micro-munitions
Protection	Withstands direct tank shells, firearms, and a mid-air collision with an F-22 Raptor
HUD / AI	JARVIS OS; targeting reticule; threat assessment; full HUD overlays
Weakness	Ceiling limitation at extreme altitude (used against Stane as a tactic); damaged beyond repair vs. Iron Monger
Fate	Decommissioned after Iron Monger fight; stored in Hall of Armors until Malibu attack

MK IV MK III Replacement Combat Suit Iron Man 2 (2010)	
Construction	Direct structural upgrade/replacement for MK III; gold-titanium alloy with minor refinements
Features	All MK III capabilities retained with minor durability improvements
Notable	First armor to be repaired after battle damage rather than decommissioned; seen repaired at the start of The Avengers
Fate	Destroyed in Malibu Mansion attack — Iron Man 3

MK V "Suitcase Suit" Portable Emergency Suit Iron Man 2 (2010)	
Construction	Folds and collapses entirely into a standard-sized briefcase for transport; silver color scheme
Weight	Lightest suit at time of creation due to miniaturized plates
Deployment	Self-assembles around Stark in seconds from the suitcase form
Flight	Limited sustained flight; not built for high-speed or extended missions
Weapons	Hand repulsors and chest RT only; significantly reduced vs. MK IV
Armor	Thin miniaturized plates — less protective than full combat suits
Strength	Still powerful enough to crush an arc reactor with bare hands
Fate	Destroyed in Malibu Mansion attack — Iron Man 3

MK VI New Element Combat Suit Iron Man 2 (2010)	
Power Source	New synthetic element replaces toxic palladium; higher energy output; first triangular chest piece / Arc Reactor
Construction	Gold-titanium alloy; redesigned triangular chest plate
Flight Speed	~Mach 3–4 (~1,020–1,360 m/s) estimated from combat feats; improved over MK IV
Weapons	All prior weapons; ring of micro-munition missiles in each gauntlet; laser system on back of each hand capable of cutting most metals; shoulder-mounted munitions
Protection	Withstood Thor's Mjolnir strike during their forest standoff
Notable	First suit built around the new non-toxic element; first suit with hand-mounted laser cutters
Fate	Heavily damaged restarting Helicarrier turbines in The Avengers; repaired and continued use

MK VII Rapid Deployment Combat Suit The Avengers (2012)	
--	--

Deployment	Rocket-pod launched by JARVIS; homes to wrist-worn bracelets via laser barcode scanner; self-assembles mid-air with no gantry needed
Flight	Extended thruster pack on back; dedicated calf and leg thrusters; hands free at full thrust
Weapons	All MK VI weapons; auto-targeting rocket barrage; leg-mounted missile compartments; rechargeable high-power lasers; shoulder dart launchers
Protection	Survived full Leviathan destruction and sustained Battle of New York Chitauri assault
HUD / AI	JARVIS OS; real-time Chitauri tracking; threat prioritization
Notable	First suit with laser-guided bracelet rapid-deploy system; first with dedicated leg thrusters freeing arms during flight
Fate	Heavily damaged in Battle of New York; repaired and stored in Hall of Armors

PHASE 2 — THE IRON LEGION (MK VIII – MK XLI)

34 specialized suits built between *The Avengers* and *Iron Man 3* due to Stark's PTSD. All destroyed in Battle on the Norco or Clean Slate Protocol at end of *Iron Man 3*.

MK VIII Iron Legion — Combat Upgrade Iron Man 3 (2013)	
JARVIS App	"AN UPGRADE TO THE MARK VII'S DEPLOYMENT AND FLIGHT SYSTEMS, THE MARK VIII IS MORE POWERFUL AND VERSATILE THAN ITS PREDECESSOR."
Construction	Titanium and platinum plating + extra Kevlar layer; first Iron Legion suit; upgraded from MK VII
Features	Superior weapons and flight systems; increased impact resistance; withstands force of a small missile
AI	JARVIS OS; advanced donning system; status monitoring; filtration system
Fate	Targeted Pepper Potts (Extremis); Pepper tore this suit apart and used its repulsor and missile to kill Killian; Clean Slate Protocol

MK IX Iron Legion — Flight Redesign Prototype Iron Man 3 (2013)	
JARVIS App	"ARMOUR REDESIGN PROTOTYPE WITH ADDED MANOEUVRING THRUSTERS AND FLIGHT CAPABILITIES."
Features	Enhanced maneuvering thrusters; improved flight agility over MK VIII
Design	Kit-bash of MK VII with MK XVII legs
Fate	Destroyed during Battle on the Norco or Clean Slate Protocol

MK X Iron Legion — High Impact Chest Redesign Iron Man 3 (2013)	
JARVIS App	"REDESIGNED HIGH IMPACT CHEST PLATE WITH REINFORCED GOLD TITANIUM STABILIZERS, AND LARGER FOOTPADS FOR INCREASED STABILITY."
Features	Reinforced gold-titanium chest stabilizers; enlarged footpads for improved balance and ground stability
Fate	Destroyed during Battle on the Norco or Clean Slate Protocol

MK XI Iron Legion — Stealth Base Prototype Iron Man 3 (2013)	
JARVIS App	"BASE MODEL REDESIGN, PROTOTYPE FOR FUTURE STEALTH ARMOUR SUITS."

Features	Base model redesign that served as early groundwork toward the dedicated stealth suits (MK XV, MK XVI)
Design	Mix of MK VII with MK XVII leg components
Fate	Destroyed during Battle on the Norco or Clean Slate Protocol

MK XII Iron Legion — Velocity Prototype Iron Man 3 (2013)	
JARVIS App	"BASED ON THE MARK VIII UPGRADE, THE MARK XII PROTOTYPE FEATURES A COMPOSITE GOLD TITANIUM, HIGH-DENSITY CARBON, AND STEEL ALLOY EXOSKELETON."
Construction	Composite exoskeleton of gold-titanium, high-density carbon, and steel alloy — testing advanced materials combinations for future speed-oriented suits
Design	Grey and gold color scheme; parts from MK VII and MK XL
Fate	Destroyed during Battle on the Norco or Clean Slate Protocol

MK XIII Iron Legion — High Altitude Velocity Prototype Iron Man 3 (2013)	
JARVIS App	"VELOCITY SUIT PROTOTYPE WITH PRELIMINARY CHEST PLATE REDESIGN FOR HIGH ALTITUDE FLIGHT AND PRESSURE RESISTANCE."
Features	Chest plate redesigned for high-altitude pressure resistance; early step toward MK XXXI Piston's speed development
Design	Grey and silver color scheme; parts from MK VII, MK XVII, and MK XL
Fate	Destroyed during Battle on the Norco or Clean Slate Protocol

MK XIV Iron Legion — Lightweight Maneuverability Prototype Iron Man 3 (2013)	
JARVIS App	"LIGHTWEIGHT ARMOUR PROTOTYPE, NOT OUTFITTED FOR COMBAT OR EXTENSIVE FLIGHT. DESIGNED FOR HIGH MANOEUVRABILITY AND SPEED."
Features	Lightweight build; optimized for agility and speed over protection or combat; not combat-ready
Design	Multi-part kit-bash; distinctive MK XXV helmet visible
Fate	Destroyed during Battle on the Norco or Clean Slate Protocol

MK XV "Sneaky" Iron Legion — Stealth Suit Iron Man 3 (2013)	
JARVIS App	"STEALTH ARMOUR PROTOTYPE UPGRADE WITH SONIC DAMPENING THRUSTERS AND RETRO-REFLECTIVE COATING WHICH ADAPTS THE SUITS TINT TO THE SURROUNDING ENVIRONMENT FOR STEALTH CAPABILITIES."
Stealth	Retro-reflective coating dynamically darkens or lightens to match surrounding environment; virtually invisible to enemy early-warning radar; inspired by stealth aircraft design
Thrusters	Sonic dampening thrusters reduce acoustic signature during flight
Notable	First Iron Legion suit with a nickname; first Iron Man suit designed specifically for stealth operations; last suit Tony used in the IM3 battle before being totaled
Fate	Destroyed by MK XLII explosion at end of Iron Man 3 final battle; Clean Slate Protocol

MK XVI "Nightclub" Iron Legion — Advanced Stealth Suit Iron Man 3 (2013)	
JARVIS App	"MARK XV UPGRADE. LIMITED WEAPON CAPABILITIES, BUT HIGHLY OPTIMIZED FOR STEALTH MISSIONS."

Stealth	Enhanced stealth over MK XV Sneaky; even harder to detect; reduced weapons payload for stealth priority
Design	Sleek design with raised shoulder sections; no visible mouth plate (reinforcing silence); promo material shows black and silver — film shows standard red and gold
Fate	Destroyed during Clean Slate Protocol

MK XVII "Heartbreaker" Iron Legion — Artillery RT Suit Iron Man 3 (2013)	
JARVIS App	"ARTILLERY LEVEL REPULSOR TECHNOLOGY SUIT WITH REINFORCED CHEST RT AND ARMOUR STABILIZATION DAMPERS. IT IS ALSO EQUIPPED WITH ADJUSTABLE POWER LEVEL REPULSORS."
Chest RT	Massively oversized Arc Reactor chest piece; the defining feature of the suit
Weapons	Artillery-level repulsor blasts; adjustable narrow or wide beam; generates a repulsor energy shield from chest RT
Stability	Armour stabilization dampers to manage recoil from extreme energy output
Fate	Destroyed during Clean Slate Protocol

MK XVIII "Casanova" Iron Legion — Artillery Stealth Hybrid Iron Man 3 (2013)	
JARVIS App	"ARTILLERY LEVEL STEALTH SUIT WITH OVERSIZED AND REINFORCED CHEST RT. DESIGNED FOR MULTIFUNCTIONAL COMBAT SITUATIONS."
Features	Combines oversized artillery-grade chest RT with stealth capability; designed for multifunctional engagements
Design	Parts from MK XVII chest, MK XXXIII, War Machine MK II/Iron Patriot, and MK VII helmet
Fate	Destroyed during Clean Slate Protocol

MK XIX "Tiger" Iron Legion — Hypersonic Velocity Suit Iron Man 3 (2013)	
JARVIS App	"HIGH VELOCITY SUIT WITH ADVANCED FLIGHT AND THRUSTER SYSTEMS, GIVING IT HYPERSONIC CAPABILITIES. LIMITED OPERATIONAL COMBAT SYSTEMS."
Speed	Hypersonic-capable per JARVIS description; early high-speed design in the path toward MK XXXI Piston and MK XL Shotgun
Trade-off	Limited combat systems in exchange for speed optimization
Fate	Destroyed during Clean Slate Protocol

MK XX "Python" Iron Legion — High Altitude Flight Prototype Iron Man 3 (2013)	
JARVIS App	"EXTENDED FLIGHT PROTOTYPE SUIT WITH ADVANCED STRUCTURAL INTEGRITY AND HEAVIER GAUGE ALLOY ARMOUR FOR HIGH ALTITUDE FLIGHT."
Features	Extended flight capability; heavier gauge alloy; enhanced structural integrity for high-altitude stress
Design	Black and gold color scheme; parts from MK VII, MK XVII legs, and MK XXXIII helmet
Fate	Destroyed during Clean Slate Protocol

MK XXI "Midas" Iron Legion — High Altitude Prototype Iron Man 3 (2013)	
---	--

JARVIS App	"HIGH ALTITUDE PROTOTYPE SUIT UPGRADE WITH ENRICHED GOLD TITANIUM ALLOY ARMOUR."
Construction	Enriched gold-titanium alloy throughout; improved high-altitude performance
Design	Entirely gold color scheme — the most visually ostentatious Iron Legion suit
Fate	Destroyed during Clean Slate Protocol

MK XXII "Hot Rod" Iron Legion — War Machine Speed Prototype Iron Man 3 (2013)	
JARVIS App	"WAR MACHINE ARMOUR PRELIMINARY REDESIGN, BUILT FOR SPEED AND AGILITY. FEATURING THE LATEST THRUSTER DESIGN, WITH THE SAME PROTECTION, BUT AT 1/3 THE WEIGHT."
Design	Prototype for War Machine MK II / Iron Patriot — same design without the back-mounted cannon; flame decals referencing Stark's car collection
Weight	1/3 the weight of War Machine armor with equivalent protection
Features	Latest thruster design; optimized for speed and agility over firepower
Fate	Destroyed during Clean Slate Protocol

MK XXIII "Shades" Iron Legion — Extreme Heat Protection Suit Iron Man 3 (2013)	
JARVIS App	"ARMOUR EXOSKELETON CONSISTS OF HIGH-GRADE COATED CERAMICS, REINFORCED CARBON, REFLECTIVE VISOR, AND FLEXIBLE INSULATION TO PROVIDE PROTECTION FROM EXTREME HEAT."
Construction	High-grade coated ceramics; reinforced carbon; flexible thermal insulation
Protection	Designed to protect wearer from extreme heat environments; tinted reflective visor
Design	Camouflage paint job suggesting desert operations; re-color of MK XL Shotgun
Fate	Destroyed during Clean Slate Protocol

MK XXIV "Tank" Iron Legion — Heavy Artillery Suit Iron Man 3 (2013)	
JARVIS App	"ARTILLERY LEVEL REPULSOR TECHNOLOGY SUIT WITH REINFORCED CHEST RT AND STABILIZATION DAMPERS. DESIGNED FOR HEAVY COMBAT SITUATIONS, MIX OF GOLD TITANIUM AND KEVLAR REINFORCED ARMOUR PLATING."
Construction	Gold-titanium and Kevlar reinforced armor plating; heavier than Heartbreaker
Weapons	Artillery-grade chest RT; stabilization dampers; designed as upgrade over MK XVII Heartbreaker
Design	Brown and gunmetal color scheme; re-color of MK XVII
Fate	Destroyed during Clean Slate Protocol

MK XXV "Striker / Thumper" Iron Legion — Heavy Construction Suit Iron Man 3 (2013)	
JARVIS App	"PRELIMINARY DESIGN FOR CONSTRUCTION SUIT ARMOUR WITH REMOVABLE PNEUMATIC HAMMERS."
Arms	Removable pneumatic jackhammer arms replace traditional hands; can pulverize concrete
Environmental	Designed to withstand high temperatures and electrical surges
Notable	Used by JARVIS to intercept and pulverize two Extremis soldiers heading toward Rhodes

Fate	Destroyed during Clean Slate Protocol
-------------	---------------------------------------

MK XXVI "Gamma"	Iron Legion — Heavy Construction Upgrade Iron Man 3 (2013)
JARVIS App	"HEAVY CONSTRUCTION SUIT UPGRADE. LIMITED COMBAT AND FLIGHT CAPABILITIES, WITH REMOVABLE MULTI-FUNCTIONAL REPEATING PNEUMATIC HAMMERS."
Features	Full construction suite with multi-functional repeating pneumatic hammers; green paint suggests possible gamma radiation protection per promo material
Trade-off	Limited combat and flight capability in exchange for construction power
Design	Green color scheme; same form as MK XXV
Fate	Destroyed during Clean Slate Protocol

MK XXVII "Disco"	Iron Legion — Advanced Camouflage Suit Iron Man 3 (2013)
JARVIS App	"ADVANCED RETRO-REFLECTIVE SUIT, FEATURES ENHANCED CAMOUFLAGE ABILITIES AND COMPOSITE EXOSKELETON ARMOUR."
Features	Enhanced retro-reflective camouflage; composite exoskeleton armor
Design	Multi-colored panel scheme; parts from War Machine MK II/Iron Patriot, MK XL, and MK VII
Fate	Destroyed during Clean Slate Protocol

MK XXVIII "Jack"	Iron Legion — Radiation Protection Suit Iron Man 3 (2013)
JARVIS App	"RADIATION PROTECTION SUIT WITH A DOUBLE WALLED ALLOY ARMOUR TO PROTECT THE USER FROM VARYING TYPES AND LEVELS OF RADIATION."
Construction	Double-walled alloy armor shell; protects against varying types and intensity levels of radiation
Design	Warning-symbol-inspired color scheme; parts from MK VII, MK XVII, and MK XXXIII
Fate	Destroyed during Clean Slate Protocol

MK XXIX "Fiddler"	Iron Legion — Lightweight Single-Hammer Suit Iron Man 3 (2013)
JARVIS App	"LIGHTWEIGHT CONSTRUCTION SUIT WITH SINGLE REMOVABLE MULTI-FUNCTIONAL REPEATING PNEUMATIC HAMMER."
Features	Single pneumatic hammer (vs. MK XXV/XXVI dual hammers); lighter weight; asymmetric design
Design	Asymmetric kit-bash of MK VII, MK XVII, and one MK XXV arm; abdomen from MK XXXIX
Fate	Destroyed during Clean Slate Protocol

MK XXX "Blue Steel"	Iron Legion — High Energy Output Suit Iron Man 3 (2013)
JARVIS App	"ENHANCED ENERGY SUIT, DESIGNED FOR HIGH ENERGY OUTPUT."
Features	Enhanced energy output across all systems; Silver Centurion architecture with energy routing upgrades
Design	Blue and silver color scheme; re-color and prototype of MK XXXIII Silver Centurion
Fate	Destroyed during Clean Slate Protocol

MK XXXI "Piston"	Iron Legion — High-Velocity Centurion Suit Iron Man 3 (2013)
-------------------------	--

JARVIS App	"OUTFITTED FOR EXTREME ACCELERATION WITH EXTENDED POWER SUBSYSTEMS AND ENHANCED ENERGY OUTPUT."
Speed	~Mach 5 (~1,715 m/s) — second-fastest pre-nanotech suit; prototype for MK XL Shotgun
Energy System	Extended power subsystems; enhanced energy output distributes power across all repulsor systems including Unibeam
Propulsion	Repulsor-propelled back thrusters dedicated to high-velocity flight
Weapons	Enhanced repulsors; Unibeam; shoulder-mounted mini-missiles; arm rockets; lasers; infrared flares
Design	Teal and silver color scheme
Notable	First suit to attack Extremis soldiers in IM3 final battle — and first destroyed (head and arm ripped off by three soldiers)
Fate	Destroyed by Extremis soldiers during Battle on the Norco

MK XXXII "Romeo" Iron Legion — Lightweight Enhanced RT Iron Man 3 (2013)	
JARVIS App	"LIGHTWEIGHT ENHANCED RT SUIT, WITH REINFORCED CHEST PLATE AND HIGH-ENERGY OUTPUT SUBSYSTEMS."
Features	Reinforced chest plate; high-energy output subsystems; lighter weight version of the Heartbreaker concept
Design	MK XVI (Nightclub) helmet and arms; MK XVII and MK VII body parts
Fate	Destroyed during Clean Slate Protocol

MK XXXIII "Silver Centurion" Iron Legion — Enhanced Energy Combat Suit Iron Man 3 (2013)	
JARVIS App	"REDESIGNED ENHANCED ENERGY SUIT WITH UPGRADED CHEST RT FOR HIGH-ENERGY OUTPUT AND OUTFITTED WITH RETRACTABLE GAUNTLET BLADE."
Weapons	Hidden retractable blade in each forearm gauntlet; upgraded chest RT for high-energy output
Design	Silver armor; based directly on the classic Marvel Comics Silver Centurion; distinctive triangular chest piece and unique shoulders
Notable	First suit Tony personally wore after triggering House Party Protocol; first suit destroyed by Aldrich Killian
Fate	Destroyed by Aldrich Killian

MK XXXIV "Southpaw" Iron Legion — Rescue Prototype (Single Claw) Iron Man 3 (2013)	
JARVIS App	"DISASTER RESCUE PROTOTYPE SUIT WITH SINGLE RETRACTABLE PNEUMATIC PINCHER AND MADE UP OF LIGHTWEIGHT ALLOY ARMOUR."
Features	Single retractable pneumatic pincher claw (one arm); lightweight alloy; prototype for MK XXXV Red Snapper
Design	Asymmetric and top-heavy; kit-bash including MK XXXV upper body and claw arm on standard base
Fate	Destroyed during Clean Slate Protocol

MK XXXV "Red Snapper" Iron Legion — Disaster Rescue Suit Iron Man 3 (2013)	
JARVIS App	"DISASTER RESCUE SUIT UPGRADE WITH DUAL RETRACTABLE PNEUMATIC PINCHERS AND HEAVY GAUGE GOLD TITANIUM ALLOY ARMOUR. DESIGNED FOR SURVIVAL AND RESCUE OPERATIONS IN EXTREMELY DANGEROUS ENVIRONMENTS."

Arms	Dual long retractable pneumatic pincher claws — reach into tight collapsed spaces and free trapped victims from debris
Construction	Heavy-gauge gold-titanium alloy; hydraulic cylinders for structural strength; widened feet for stability in unstable terrain
Specialization	Survival and rescue in extremely dangerous environments (collapses, disasters)
Fate	Destroyed during Clean Slate Protocol

MK XXXVI "Peacemaker" Iron Legion — Crowd Control Suit Iron Man 3 (2013)	
JARVIS App	"DESIGNED FOR CROWD CONTROL, WITH NON-LETHAL SONIC REPULSORS."
Weapons	Non-lethal sonic repulsors — designed to neutralize and disperse crowds without lethal force
Design	Same base form as MK XXXV Red Snapper without the claw arms; large imposing frame for crowd presence
Fate	Destroyed during Clean Slate Protocol

MK XXXVII "Hammerhead" Iron Legion — Deep Sea Diving Suit Iron Man 3 (2013)	
JARVIS App	"DEEP SEA DIVING SUIT DESIGNED FOR EXTREME PRESSURE AND TRAVELING AT HIGH-SPEEDS UNDERWATER. FEATURES UPGRADED WORK-LIGHTS FOR HIGH VISIBILITY."
Specialization	Deep-sea operations; extreme water pressure resistance
Propulsion	High-speed underwater travel capability
Lighting	Upgraded high-visibility work-lights integrated into helmet
Design	Wearable-submarine aesthetic; original concept was designed for the first Iron Man film
Fate	Destroyed during Clean Slate Protocol

MK XXXVIII "Igor" Iron Legion — Heavy Lifting Suit Iron Man 3 (2013)	
JARVIS App	"CAPABLE OF LIFTING AND TRANSPORTING VERY HEAVY OBJECTS. ENHANCED CHEST RT ALLOWS FOR HIGH-ENERGY OUTPUT AND EXTREME STRENGTH. NOT DESIGNED FOR COMBAT."
Specialization	Extreme heavy lifting and structural support — not designed for combat
Design	Massively oversized hunched torso; running lift mechanism visible along spine; warning symbols and stripes
Power	Enhanced chest RT allows for extreme energy output to drive superhuman strength
Capability	Held up a collapsing dock crane to prevent structural collapse during the Battle on the Norco
Fate	Destroyed during Clean Slate Protocol

MK XXXIX "Starboost / Gemini" Iron Legion — Sub-Orbital Space Suit Iron Man 3 (2013)	
JARVIS App	"SUB-ORBITAL SUIT DESIGNED FOR OFF-EARTH MISSIONS. ARMOUR FEATURES INTEGRATED REMOVABLE BOOSTER PACK, SPECIALIZED MANEUVERING THRUSTERS, AND HEAVY GAUGE HEAT SHIELD."
Specialization	Sub-orbital spaceflight and off-Earth operations — only Iron Legion suit designed for space

Life Support	Fully sealed pressurized interior; self-contained oxygen supply for vacuum exposure
Propulsion	Integrated removable booster pack mounted on back; specialized maneuvering thrusters for zero-G and near-vacuum
Heat Shield	Heavy-gauge heat shield for atmospheric re-entry thermal protection
Design	White with black/grey heat shield surfaces; gold astronaut-style visor; extended shoulder pieces; dual large booster rockets on back
Notable	Predecessor to MK L's space capability; inspired by Stark nearly dying in the Chitauri portal with MK VII
Fate	Destroyed during Clean Slate Protocol

MK XL "Shotgun" Iron Legion — Hypervelocity Suit Iron Man 3 (2013)	
JARVIS App	"HIGH VELOCITY SUIT UPGRADE. OPTIMIZED FOR EXTREME VELOCITIES, EXTENDED FLIGHT MISSIONS, AND CAPABLE OF ACHIEVING SPEEDS IN EXCESS OF MACH 5."
Speed	>Mach 5 (>1,715 m/s) — fastest pre-nanotech suit ever built; roughly double MK XXXI Piston
Classification	Hypervelocity Traveling Suit; next-generation over MK XXXI
Named For	The explosive sonic boom it produces when breaking the sound barrier — sounds like a shotgun blast
Propulsion	Streamlined aerodynamic armor design; modified high-power repulsors tuned for maximum thrust
Trade-off	Reduced armament for maximum speed optimization
Fate	Sliced in half by an Extremis soldier during Battle on the Norco

MK XLI "Bones" Iron Legion — Skeletal Exo Suit Iron Man 3 (2013)	
JARVIS App	"OPTIMIZED FOR SPEED AND MANEUVERABILITY. NOT SUITED FOR HEAVY COMBAT."
Design	Exposed internal exoskeletal frame with minimal outer armor plating — resembles a mechanical skeleton
Features	Maximum speed and flexibility; more armor plating can be added on top of this base exoframe
Modular	Demonstrated splitting into six independently flight-capable sections that then re-assemble — early experiment toward MK XLII's flying modules concept
Trade-off	Extremely low armor protection; not built for combat
Fate	Destroyed during Clean Slate Protocol

PHASE 3 — MODERN SUITS (MK XLII – MK LXXXV)

MK XLII "Prodigal Son" Prehensile Autonomous Suit Iron Man 3 (2013)	
Deployment	Controlled via subcutaneous microchips implanted in Stark's left arm; each module independently flies to Stark and auto-assembles on the body anywhere — no bracelets or gantry needed
Design	Gold-dominant with red accents (inverted from standard); modular segmented sections
Remote Wear	Can assemble around another person (demonstrated on Pepper Potts); can be remotely operated without Tony inside
Prototype Flaw	Incomplete at time of use — sections sometimes assemble in wrong order or fail; glitchy under stress
Power	Rechargeable via standard car battery or household electricity

Weapons	Standard repulsors, Unibeam, shoulder missiles
Fate	Placed on Aldrich Killian and self-detonated in failed kill attempt; Clean Slate Protocol

MK XLIII	Perfected Prehensile Suit Avengers: Age of Ultron (2015)
Features	Perfected and fully functional version of MK XLII; same prehensile auto-assembly — no more glitches
Sentry Mode	Can be left in autonomous sentry/guard mode to protect a location while Stark steps out
Armor	Thicker plating than MK XLII; traditional red and gold color scheme restored
Weapons	Repulsors; Unibeam; shoulder-mounted dart launchers; gauntlet missiles; arm rockets
Integration	Inner suit specifically designed to fit inside MK XLIV Hulkbuster — first suit-inside-a-suit design
HUD / AI	JARVIS OS (final suit to use JARVIS before his transformation into Vision)
Fate	Heavily damaged by Ultron during Age of Ultron

MK XLIV "Hulkbuster"	Extra Heavy-Duty Modular Anti-Hulk Armor Avengers: Age of Ultron (2015)
Co-Designed By	Tony Stark and Bruce Banner; built specifically as a Hulk-containment safeguard
Size	Far larger than any standard suit; towers over even the Hulk; multiple arc reactors throughout the frame
Deployment	Delivered by Veronica — an orbital drop pod satellite hovering above combat zone; assembles around MK XLIII mid-field
Replacement Parts	Veronica continuously supplies replacement components mid-battle — if a limb is destroyed, Veronica drops a replacement that auto-attaches
Weapons	Repulsors strong enough to hold down the Hulk (temporarily); small missiles; extreme melee force
Special Arm	Detachable jackhammer arm for massive concentrated blunt force strikes; demonstrated the 'Go to sleep' blow
Chemical	Gas attack capability
Power	Multiple Arc Reactors distributed throughout the frame for extreme sustained energy output
Notable	Successfully subdued the Hulk in Johannesburg — the only suit ever designed and battle-tested against a Hulk rampage

MK XLV	Combat Suit Avengers: Age of Ultron (2015)
Design	Streamlined silhouette; bright red and gold; more saturated color vs. MK XLIII
Features	Improved aerodynamics; enhanced repulsors; standard full weapons array retained
HUD / AI	JARVIS OS — last suit Tony used before JARVIS became Vision
Used In	Battle of Sokovia against Ultron and his robot army
Fate	Heavily damaged in Sokovia battle

MK XLVI	Combat Suit (Bleeding Edge Concept) Captain America: Civil War (2016)
AI	FRIDAY — Stark's new AI after JARVIS became Vision
Helmet	Retractable foldaway helmet panels that fold back for unobstructed vision — new feature
Unibeam	Significantly upgraded Unibeam — one sustained blast completely severed Bucky's vibranium arm

Features	Standard full weapons suite; enhanced repulsors; improved structural integrity over MK XLV
Notable	Used in the airport battle (Leipzig) and Siberia confrontation vs. Captain America and Bucky

MK XLVII Combat Suit Spider-Man: Homecoming (2017)	
AI	FRIDAY
Design	Grey and red accent color scheme; compact silhouette
Features	Standard repulsors, Unibeam, full weapons suite; FRIDAY AI integration
Notable	Used to intercept Vulture's heist on a Stark cargo plane; brief on-screen time

MK L First Nanotech Suit — Bleeding Edge Avengers: Infinity War (2018)	
Technology	First nanotech suit — nanite particles stored inside the chest Arc Reactor; deploys directly from casual clothing
Speed	Minimum Mach 9 (~3,087 m/s) — capable of achieving orbital escape velocity; fastest pre-MK LXXXV suit
Deployment	Nanites form around Stark in seconds from the chest reactor; can generate any weapon or structural shape on demand
Weapons	Forms any weapon in real-time: energy blades, shields, cannons, drills, whips; repulsors; Unibeam; finger lasers; nano-blade
Nano Boost	Forms a large thruster booster under feet for extreme speed burst
Design	Multi-layer one-piece muscle design; no separate armor segments
AI	FRIDAY; neuro-interface capable — responds to thought
Life Support	Sealed environment; space and deep-vacuum capable
Based On	Marvel Comics Bleeding Edge armor concept
Weakness	Nanoparticle supply depletes under sustained heavy damage — nearly exhausted fighting Thanos on Titan
Fate	Destroyed by Thanos on Titan; replaced by MK LXXXV

MK LXXXV Final Nanotech Suit — Ultimate Armor Avengers: Endgame (2019)	
Technology	Enhanced nanotech over MK L; Smart Gold-Titanium Nano-Particles; segmented design (separate armor pieces, not one-piece)
Deployment	2.6 seconds from detachable heart-shaped Arc Reactor; deploys through T-shirt fabric without specialized clothing; 'Limited mode' for stealth partial deployment
Power	15 Arc Reactors — 1 main heart-shaped + 14 Micro-RTs distributed across upper body
AI	FRIDAY; Neuro-Interface circuitry on backside of Arc Reactor and innermost armor layer — thought-controlled
Weapons	Repulsors (thruster-enhanced melee punches and kicks); Unibeam; finger-integrated lasers; energy blades; energy shields; forms any nano-weapon
Nano Lightning Refocuser	Absorbs incoming energy attacks and redirects them — recharged repulsors dramatically against Thanos
Durability	Most durable suit ever built; withstood Thanos' unarmed attacks far better than MK L; survived an accidental Mjolnir strike; contained all 6 Infinity Stones simultaneously

Infinity Gauntlet	Nano-formed a functional Stark Infinity Gauntlet around right hand; channeled all 6 Infinity Stones to reverse Thanos' Snap and erase his army — this act killed Stark
Anti-Phasing	Fully sealed surface and muscle layer; nano-particle frequency adapts to block shrinking-tech (Ant-Man) and phasing-tech infiltration
Life Support	Airtight seal; self-supplying breathable air; space and deep-water rated
Hologram	Built-in holographic message recording (Stark recorded a farewell to Pepper and Morgan before the Time Heist)
AR Mode	Nano-tech AR glasses form when suit not deployed; touch-controlled HUD
Notable	Tony Stark's 85th and final Iron Man suit; used to perform the Snap that reversed Thanos' genocide and saved the universe; Stark died from the Infinity Stone energy shortly after

Note: MK numbers between MK XLVII and MK L were not shown on-screen. The Rescue Armor (Pepper Potts, Endgame) is outside Tony's personal numbering sequence. Speed data sourced from JARVIS Second Screen app, on-screen feats, and official MCU supplementary material.
